About This Game

Fly low and strike deep in the re-invention of the Gunship flight combat franchise. In Gunship!, you're the point man for WWII -- Russian forces have amassed on one side, NATO on the other in a flashpoint conflict in Eastern Europe. You are about to deploy the most devastating weapon in the inventory of war: the helicopter Gunship! Finesse, raw power, stealth and speed blend in a high-wire balancing act of exacting proportions. In the 21st century, the fate of war can turn on one micro-engagement in the epicenter of action.

Features:

- Separate modes emphasizing realistic simulation or instant action to suit different play styles.
- Customize your crew and loadout in American, German, Russian, and British helicopters.
- Enter the fray in 20 unique missions

I have 2 screens for video editing, This game will not work and keeps trying to switch between the screens

I have tried a bunch of things to fix it but havent been able to play the game. Great game, brings back lots of memories.

Download the modm8 here to fly the AI helicopters and a few more, you need to use wayback machine though:

<http://www.quantumhammer.com/simwarrior/gunship/utilities/gsmodm8v3.exe>. Didn't work. I used to play this game years ago and loved it. Unfortunately it does not run well on modern hardware.

[Game is very unstable in Windows 10 and crashes frequently even when ran in compatability mode.](#)

[.Game is not playable in Windows 10.. For anyone having issues with old games like these on modern systems \(including mechwarrior 3\) try dgVooDoo. It's a simple process and it has my Gunship! running at 1600x900 with no graphical issues on Windows 10. If you can't figure out the instructions send me a message and I will give you a step-by-step on using dgVooDoo. I am a massive fan of the original Gunship on the C64, I must have played it for weeks, so I was very excited to play this. Sadly, despite a promising start \(the menus talk about support for HOTAS\) you can only run the game in Software Rendering mode which forces a resoluion of 640x480. If you try and run in Hardware it crashes immediately when you click on "Take Off". You could argue that 640x480 is still higher resolution than the C64...but it's the fact that the game offers up to "1920x1080" and I can't help but feel cheated being forced to play in such low-res.. Idk why people giving this a negative i loved this game as a kid and i love it now!. May be a good game, but without any documentation it is impossible to play.](#)

If you like the old Gunship franchise, this may be for you. If you do not own a joystick, get one. Or get stuck in the gunners seat giving directions to the pilot where to go. Store page really should get the key reference card from "Replacementdocs" (see forum) since there are plenty of them and keys are not bound to normal ones, i.e. i expected Map to be on M (Mike) not on N (november). I do not get the "Gunship feeling" from this game, its more a feeling of "Havoc" or "A10 tank buster", even if it says that Microprose published it. Unlike what IGN said, you can get realism in flight by changing flightmode to - realistic (Duuh).

So - should you buy it? Why not, chopper sims are not that common - and this is one of the better ones.. READ THIS TO AVOID BREAKDOWNS AND BROKEN COMPUTER PARTS DUE TO SMASHING...

Great game EVEN IN 2018.... after reading several forums posts ant fails.

Now IT WORKS on win 7x64, as it should easy on win 10.
Using GTX480 and it works in 1920x1080 32bit color mode
My os is Win 7 x64 - no compatibility mode, no launch options changed :-)

Initial problems with hardware mode was that steam doesnt support dx7 anymore, although game is optimized for it, ironic isnt it ? Follow these steps to enjoy full hd resolution if you get error:

DX7 Application Error
Error destroying D3D objects
hr: DDERR_GENERIC

i am quoting steam user that helped me:

I was getting the same error message,I just figured it out for WinXP64, might work for XP32 too. Download DGVOODOO2 version 2.52 Extract the MS folder from dgvooodoo2 2.52 to your gunship folder. On XP64 it's Program Filesx64\Steam\SteamApps\Common\Gunship Then open dxwnd.ini and change ver0=7 to ver0=8 I have two Nvidia cards so it worked in nvidia for me in the game settings, you'll have to try the different settings, or maybe ATI shows up in your game settings I don't know. Let me know if that works for you, good luck!

[ENYOJ. My childhood game! Spent years with it on my father's laptop in 2000s.](#)

[As for the negative votes. stop being a \u2665\u2665\u2665\u2665\u2665 and go back to your precious call of duty game or whatever you playing nowadays.](#)

[This is a valuable PC game for PC veterans. you cannot understand its value if you below 20 age.](#)

[And game works perfectly on my Windows 7 64bit. If you using a unfinished OS like Windows 10. then its YOUR fault. Don't blame to game.. This game was a wonderful surprise!!!!!! For a game that came out around 2000 \(or so\) it still has a lot of WOW to it. Thre graphics are a bit dated but the immersion factor is definitely there!!!!.....being of the old school \(the early years of PC flight simulator games\) this is a big plus for me. I have windows 7 \(64 bit\) with an average computer system and the game runs perfect....no problems what so ever.. Yeah Sorry I played this along long time ago.. in todays world the graphics are horrible and even though they have files to support the thrustmaster joystick](#)

sidewinder etc they dont seem to work at all.....

Please unless you like spending hours trying to revive this game to work in todays world.. take a PASS the video on the store front looks far better than you will get on your comp..... Launched once after downloading. Since then. crashes everytime.. Okay.

First things first. Gunship! is NOT a new game. As a matter of fact, it's so old that most young gamers probably never heard of it. But, that's not as bad as it sounds, because Gunship! is a good game.

It's not perfect on all fronts, but the fact that you can play this in Co-Op is awesome. (Pilot/Gunner)

Yes, I know, the store page doesn't mention it, but it has multiplayer Co-Op support.

If you experience any problems with the multiplayer part you might want to start a single player game first. (You had to do that all the time, prior to hosting a session) That's what worked back then.. A fun memory into the good ol' days of my com64c. Crashes petty often on win 8.1 system that has all the bells and whistles.. I guess that Nostalgia shouldn't be the motivating factor when buying PC games because when they don't work - like this game didn't - you're sure to be disappointed and feel cheated.

This game did not run (read: crashes endlessly) on my Windows 7 PC.

Spend your \$7 on a hooker instead of this game, it'll be money better spent.
